

Installation of the DomoClick Quick Connection and Termination System

The procedure is identical for all types

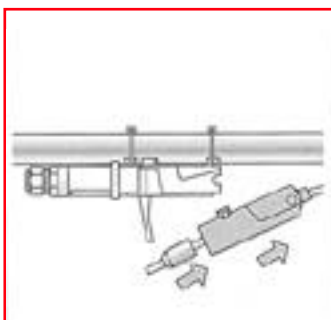

- Open the cover and draw it backwards. Remove the pressure part (cast metal).

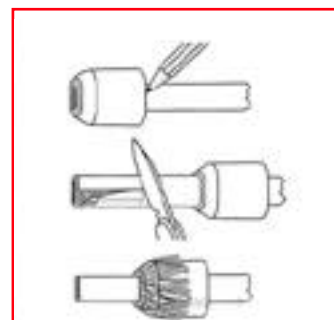

- pipe installation: use plastic fasteners
- wall installation: use metal brackets

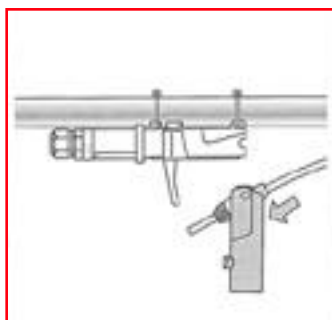

- Fix the housing to the pipe with the plastic fasteners.

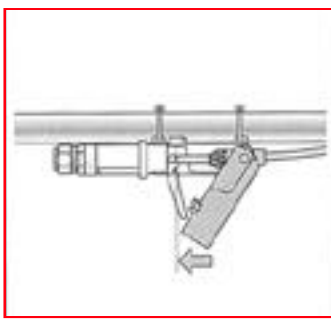

- Straighten the heating tape and cut it off at the marking of the housing.
- Push the cover and the pressure part over the heating tape.
- Remove 30 mm of the outer cover.

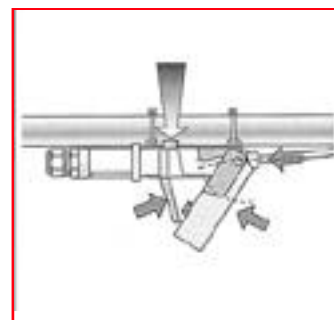

- Put the protection braiding over the pressure part.

- Push the cover to the pressure part.

- Insert the heating tape into the housing.
- IMPORTANT:** Push the heating tape against the red squeezing lever.

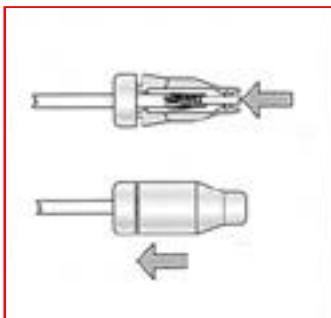

- Press the red squeezing-lever with your thumb and close the cover. Press the cover until **both** snap locks lock in place

Installation of the Termination Cap

- Remove 15 mm of the outer sheath of the heating tape.
- Pull the protection braiding backwards.

- Push the clamp part over the heating tape so that the heating tape meets the end of the clamp part.
- Push the sleeve over the clamp part until both cams snap in.

- **CAUTION!** ensure free access to the connection terminals at any time.
